The CMBTC malting plant consists of:

- Joe White Micro-Malting Unit
  (250 g - 1 kg samples, up to 20 samples at a time)
- One HDP Pilot Malting plant consisting of:
  • One Steeping Vessel capacity up to 100 kg
  • One Germination Vessel capacity up to 100 kg
  • One Kiln capacity up to 100 kg
  • One Unimalter which can carry out steeping, germinating and kilning in the same vessel. Alternatively, it can be used as a second germination vessel.

KEY ACTIVITIES

- Assess the quality and performance of new crop Canadian malting barley annually
- Assess the suitability of Canadian malting barley varieties in different malting processes
- Evaluate the commercial viability of new Canadian barley varieties
- Provide technical support, information and assistance to customers of Canadian barley
- Evaluate alternative malting processes to enhance the performance of Canadian malting barley
- Develop and deliver technical programs for domestic and international customers of Canadian malting barley
